

# Kindergarten Clay Moulding Activity

**‘A field of clay touched by the genius of man becomes a castle’**

With the aim of developing the motor skills of the students, a Clay Moulding Activity was organized for the students of Grades LKG & UKG on 31 January 2020. The young artists moulded the clay to form different objects like fruits, vegetables, animals, means of transport etc. They could be seen using various tools and instruments dexterously to give it the required designer shape. All the colours came into play while designing the 2D and 3D objects of their fascination. The activity showcased the creative skills of the students & channelised their energy in a constructive manner.
