

SCIENCE WEEK

Children of U.K.G & L.K.G celebrated science week from 9-14 October 2019.

Kindergarten is a great time to introduce kids to the magic of science! Creative and educational kindergarten science activities are just what educators need to cover basic science skills. Readily available material and step-by-step instructions, help learning, as students' face light up when they discover the world of science.

U.K.G

Children of UKG enjoyed experimenting with CD Hovercraft made using CDs and balloons, and Bubble in soap solution.

L.K.G

The tiny tots of LKG enjoyed experimenting with Magical Magnets, and learnt about separation of iron fillings from sand using magnet.

The little ones also did an experiment on Plunge and Glide, where they learnt about the concept of float and sink.
